

Temporary exhibition pavilion at Museo del Prado's Salón de Reinos

Madrid, Spain

Publication's title: Temporary exhibition pavilion at Museo del Prado's Salón de Reinos, Madrid
 Typology: Museums and Galleries, Transformation
 Client: Museo del Prado
 Surface: 5.113 m²
 Year: 2016
 Status: Competition. Finalist

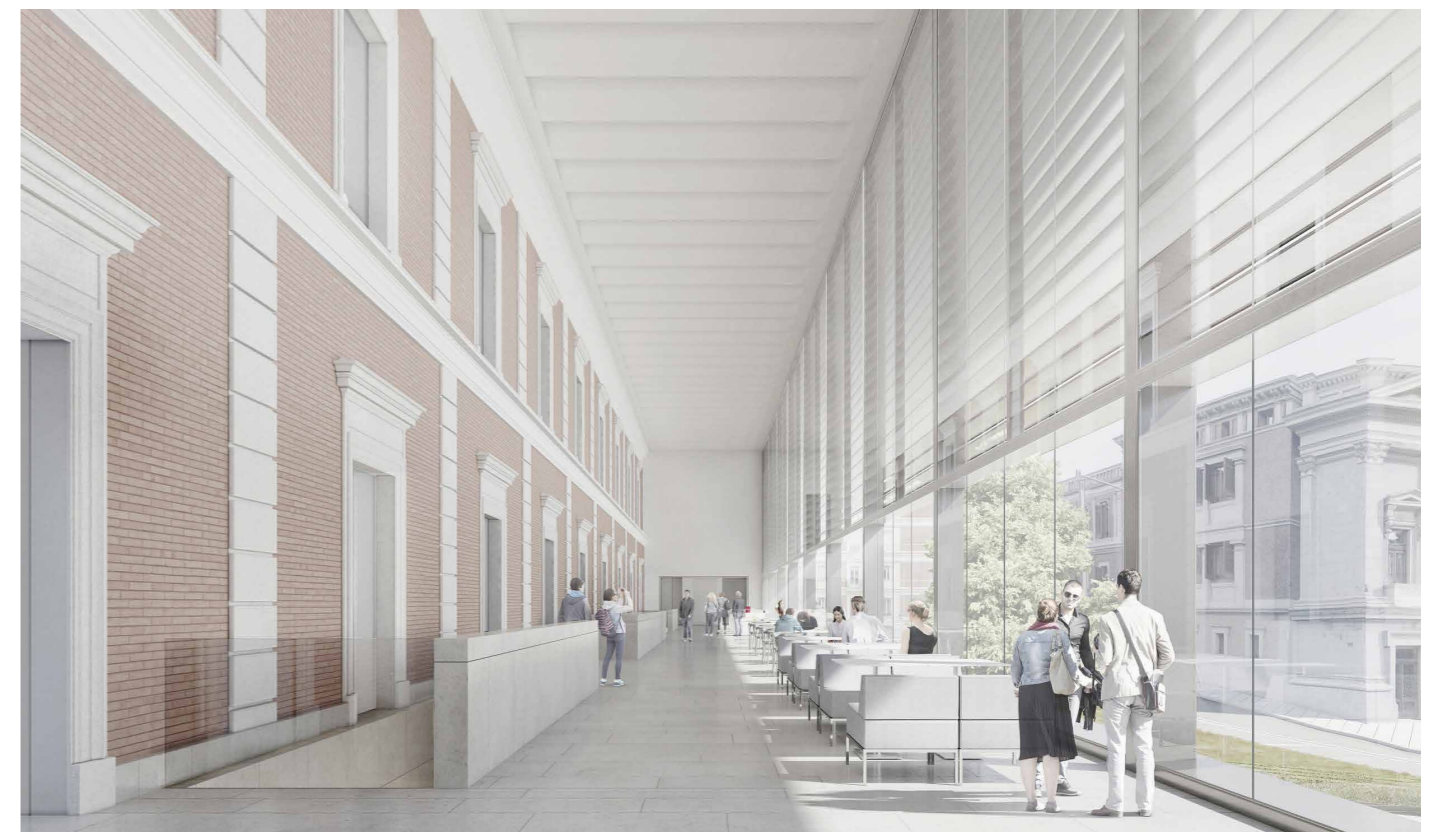

REPORT

The building we found is the result of a series of interventions along many centuries, from its construction in the early 17th, to the last intervention in the second half of the 20th century.

We decided first to eliminate those less valuable elements, as the mansard roof floor built back in 1905 and the central bay in the south side in order to introduce later the suitable modifications to adapt the building to the new requirements.

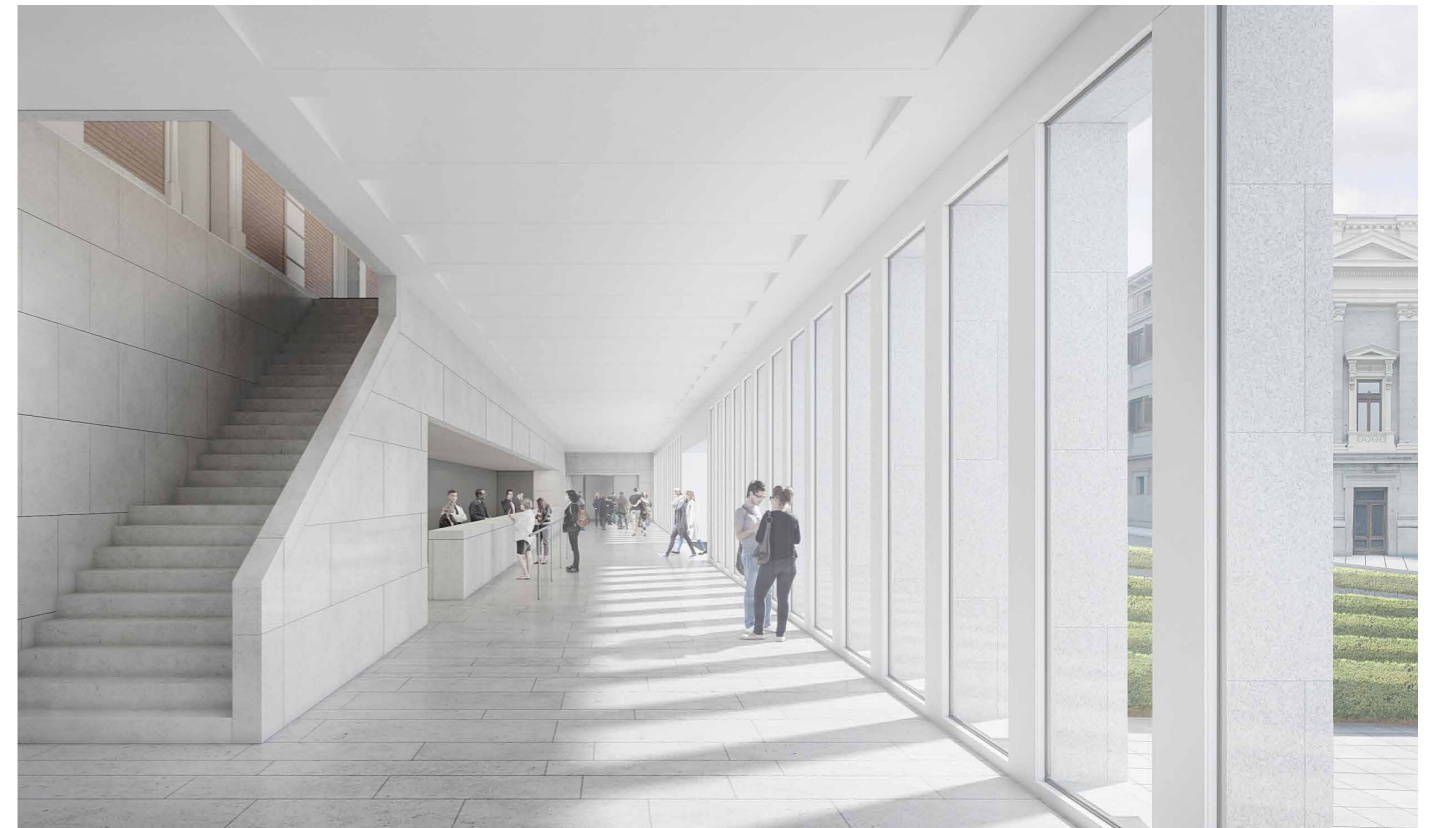

The elimination of the referred parts endows the building with better clarity both functionally and formally. This leads us to take the exhibition program of 1.600 m², the smaller of the surfaces requested in the Program.

The bay in the south side is replaced by a construction able to hold the new access point and welcome areas in its ground floor and the cafeteria and the bookstore in its first floor. Gathering the most important elements of the project, this new part of the building tries to house the functions that could hardly be included in the existing one.
